

SOFTWARE ENGINEERING LAB

Experiment No. 1

Software Requirements Specification (SRS)

Project: TeamFinder

Name: Akanksha Upadhyay

Roll No.: 20251651011

Date: 27 August 2026

1. Aim

To prepare a Software Requirements Specification (SRS) for TeamFinder, a web platform that helps students and developers find compatible teammates for projects and hackathons based on skills and interests.

2. Problem Statement

Students often struggle to find reliable teammates with complementary technical skills. TeamFinder solves this problem through skill-based matching, project posting, and collaboration requests.

3. Software Requirements Specification

3.1 Purpose

TeamFinder provides a secure platform for creating profiles, showcasing skills, finding teammates, posting projects, and collaborating effectively.

3.2 Scope

- User registration and login
- Profile and skill management
- Project and hackathon team recruitment
- Skill-based teammate matching
- Collaboration request system

3.3 Stakeholders

S.No	Stakeholder
1	Student
2	Project Creator
3	Hackathon Participant
4	Administrator

3.4 Assumptions

- Users have internet access.
- Each email address is unique.
- Users provide accurate skill information.
- Modern web browsers are supported.

4. Functional Requirements

ID	Requirement	Priority
FR-01	Register with name, email, phone, branch & skills	High
FR-02	Secure user login	High
FR-03	Create and edit user profile	High
FR-04	Match teammates by skills	High
FR-05	Post projects with required skills	High
FR-06	Search teammates by branch and skills	Medium
FR-07	Send/receive collaboration requests	High
FR-08	Join hackathon teams	Medium

5. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Performance	Pages load within 3 seconds
NFR-02	Security	JWT authentication & encrypted passwords
NFR-03	Usability	Responsive and user-friendly interface
NFR-04	Reliability	Daily database backup

6. Constraints / Business Rules

- One account per email.
- Skills required before profile completion.
- Only logged-in users can post projects.
- Duplicate collaboration requests are not allowed.

7. External Interface Requirements

User Interface: Landing Page, Sign Up, Login, Dashboard, Find Teammates, Profile, Project Details.

Input: Name, Email, Phone Number, Branch, Skills.

Output: Matched teammates, Project listings, Request status, User profile.

8. Requirement Review

1. All requirements are clear and understandable: Yes.
2. Any contradictory requirements: No.
3. Testable example: Verify that searching for 'React' displays compatible teammates.

9. Result

The Software Requirements Specification (SRS) for TeamFinder was successfully prepared. It defines the system purpose, scope, stakeholders, functional and non-functional requirements, business rules, interfaces, and expected behavior.
